

• FOR MEDICAL RESEARCH

Start with the finding, *not the format.*

*Publication-ready medical charts. No code. No data ever leaves
your browser.*

A journal page that happens to be interactive.

Loupe is an AI-assisted data-visualisation tool for medical researchers.

The product takes a researcher's plain-language finding and a CSV/Excel file, and recommends — and produces — the chart that journals expect for that finding.

Surfaces — one product, eight routes

ROUTE	PURPOSE
/	Marketing landing — hero, trust pillars, chart-type preview row
/auth	Sign-in / sign-up (cosmetic only — no real backend)
/upload	Drop CSV/Excel; column types auto-detect locally
/upload/map	Map columns to chart roles
/recommend	AI chart recommendation + reasoning + alternatives
/export	Customize rail (axes, palette, error bars, annotations) + export
/dashboard	Saved projects + recent charts
/library	Reference of supported chart types

A second surface — the **Chart library** — is a reference catalogue of all supported chart types (Kaplan–Meier, forest, ROC, Bland–Altman, volcano, box, and 18 others), used both standalone (`/library`) and as a 6-tile preview row on the landing page.

Editorial, calm, and confident.

Closer to a medical-journal masthead than a SaaS landing page.

Sentences are short and assertive. Nothing is breathless.

Voice traits

FINDINGS FIRST, FORMATS SECOND

Headlines speak to research outcomes, not features. *"Start with the finding, not the format."*
Never *"AI-powered chart generation."*

THIRD PERSON, SECOND PERSON

The product narrates itself in third person, but speaks to the user as "you." *"You can accept the suggestion, or override it with full context."* No "we" except in quotes.

ARCHITECTURE, NOT PROMISES

Privacy claims are framed as structural facts. *"The boundary isn't a promise, it's the architecture."*

REASONING, NOT MAGIC

AI is described as reasoning, not magic. *"Every recommendation arrives with the alternatives it considered and why it set them aside."*

Casing & typography conventions

- **Headlines.** Sentence case with a closing period. *"Drop a file. Confirm what we found."* Declarative, two-clause cadence is common.
- **Eyebrows.** ALL CAPS, 0.16em letter-spacing, prefixed with a small amber dot. *"01 · PRIVACY BY ARCHITECTURE"*
- **Buttons.** Sentence case. *"Start creating", "Continue to mapping".*
- **Mono labels.** Uppercase with mid-dot separators. *.CSV · .XLSX · UP TO 50 MB*
- **Italic = subjective claim.** The italic phrase is also coloured *--blue* for editorial emphasis.
- **Em-dashes everywhere.** Replace commas in any phrase that should land.
- **Real medical specifics.** "Kaplan–Meier", "Bland–Altman", "ROC", "Erasmus MC", "5-year survival", "hazard ratio". Never *"insights"*, *"powerful"*, or *"seamless."*
- **British spellings appear.** "recognise", "customise" — the founding research collaborator is European.

Specimen — verbatim copy

"Start with the finding, not the format."

HERO • LANDING

"Loupe parses your file in the browser. Only column names and your description leave the page — never the rows themselves."

TRUST PILLAR 02

"Your data stays on your device."

TRUST PILLAR 01

"We describe what we found. Loupe knows the figure that says it."

DEPARTMENT OF SURGERY • ERASMUS MC

Two axes. One accent.

Warm paper neutrals on one axis, a deep navy/amber editorial pair on the other. There is no green/red/yellow status spectrum and no gradient palette.

• PAPER & INK — SURFACE NEUTRALS

						
paper	paper-card	paper-2	hairline	hairline-strong	gray-2	gray
#FAFAF7	#FFFFFFE	#F2EFE6	#E6E3DA	#C9C5B6	#9A9A93	#6B6B66

PAPER IS THE CANVAS • PAPER-CARD IS THE LIFTED SURFACE • PAPER-2 IS THE SECOND-TIER BAND

• EDITORIAL ACCENTS — USED SPARINGLY

					
ink	ink-2	blue · primary	blue-2 · hover	amber · loupe ring	amber-soft
#0E0E0E	#2A2A28	#0B2A4A	#15406B	#B5651D	#E9B679

BLUE IS THE ONLY PRIMARY ACTION COLOUR • AMBER IS RESERVED FOR THE LOUPE-RING MOTIF AND EVENT TAGS • NEVER USED AS A BUTTON BACKGROUND

Significance is shown by **bracket + p-value**, not colour. The canvas is plain `--paper` with a barely-visible paper grain layered as two radial gradients in `body :: before` (~1% opacity blue and amber) — present but not noticeable.

Three families, one rhythm.

Source Serif 4 carries display and narrative. Inter carries UI and dense data. JetBrains Mono carries meta — file sizes, row counts, version strings, axis labels.

• DISPLAY • SOURCE SERIF 4 • 56PX • ITALIC + #0B2A4A

Borders carry the weight.

Spacing is column-driven, not token-driven. Almost all separation is a 1-pixel hairline. The system rarely casts a shadow.

• RADII • 2 / 4 / 8 / 999PX

nav • blur(20px)
saturate(180%)

Layout rules

- Container max-width **1240px**, narrow variant **880px**. Padding 16/24/32px at three breakpoints.
- Top nav is sticky, 56–60px tall; recommend page has a sticky bottom action bar.
- Three-up grids are 1px hairline-separated cells on a hairline background — no gutters. The editorial-table look.
- Section paddings: 48px / 72px / 96px vertical, 16/24/32px horizontal.
- No drop shadows on cards. Faint `0 1px 0 rgba(11,42,74,0.02)` on the customize rail is the heaviest the system gets.
- Mobile: drawer slides in from the right; customize rail becomes a bottom sheet.

Hairlines, ink, and a single accent.

Buttons, fields, the dropzone, the chart card, and the top nav. Everything else in the system is a composition of these.

- FOR MEDICAL RESEARCH

Start with the finding,
not the format.

No icon font. No icon library.

Every icon is a hand-rolled SVG drawn inline in components, with `stroke=var(--ink)`, `strokeWidth 0.75–1.4`, `fill=none`. The vocabulary is small and editorial.

- **The ring** — the central motif. 1px stroke, variable size.
- **Hamburger / close** — three lines or two crossed lines, 22×22, `strokeWidth 1.4`.
- **Check** — a 24×24 circle with an inner check path (used on the upload "file accepted" state).
- **Arrows** — typographic `→` in span, animated via `transform: translateX` on hover. Never an SVG arrow.
- **Chevrons** — typographic `+ / -` characters in mono. Custom-section toggles use these.

There is no emoji, no Unicode pictograph, no Lucide / Heroicons import. When the system needs an icon Loupe doesn't ship, substitute **Lucide** at `strokeWidth=1.5`, `--ink` stroke, `fill=none` — closest match. Charts themselves are the most common "icon-scale" graphic — pure SVG components in `components/charts/*.tsx`, treated as the brand's pictograms.

What ships in the system.
